

People simply adjust the various Morphii images to reflect the moods, emotions, pain, satisfaction, and other states they feel.

The type and intensity of experience is quantified in a database and made ready for real-time reporting.

These self-report data can be gathered by nurses, by administrators, by doctors, and by HR personnel, and others. They capture and measure the experiences that matter most in various implementations, and they deepen a crucial layer of self-report information to increase the power of healthcare analytics.

We're committed to helping the healthcare industry tackle some of the most disabling, deadly, and costly problems facing our society today, including depression, addictions, suicide, developmental disorders, neurological injuries and neurodegenerative disorders.

The morphii technology can help improve diagnostics, prevention efforts, treatment outcomes, and more, in hospitals, outpatient settings, homes, and telehealth.
