

Excellence in healthcare depends on strong engagement, clear communications, and useful data.

This, is a morphii. It might look like an emoji, or a cartoon, but it's neither. It's much more.

It is the face of a new, patented system designed to allow patients, healthcare providers, administrators, and family members to communicate and understand one another more effectively, and to generate critical self-report data for healthcare analytics.

Excellence in healthcare depends on strong engagement, clear communications, and useful data.

This, is a morphii. It might look like an emoji, or a cartoon, but it's neither. It's much more.

It is the face of a new, patented system designed to allow patients, healthcare providers, administrators, and family members to communicate and understand one another more effectively, and to generate critical self-report data for healthcare analytics.

These are also morphiis.
They portray Depression,
Pain, Nausea, and Happiness.

They are designed to help
people to share what they
feel, and how intensely they
feel it. They quantify the
qualitative, in a new way that
is clearer, language agnostic,
and culture-fair.

With morphiis, unlike star
ratings or numerical scales,
people are never asked to try
to quantify or estimate how
they feel. They simply show
it. Morphiis do the
measurement for them, in the
background.
